AUSILIO RESPIRATORIO PER PAZIENTI STERNOTOMIZZATI
AID IN RESPIRATORY THERAPY FOR PATIENTS AFTER STERNOTOMY

Fascia toracica inestensibile, a chiusura anteriore regolabile, con maniglie, utilizzabile come ausilio nella terapia respiratoria per pazienti sternotomizzati.

Bendaggio pronto per uso post-operatorio in chirurgia cardiotoracica (sternotomia), consente al paziente di effettuare movimenti respiratori, nonché espirazioni violente (colpi di tosse, starnuti, ecc.) evitando l'espansione del torace che potrebbe preludere alla possibilità di riapertura delle ferite e delle suture postoperatorie, e diminuendo il dolore. Utilizzabile anche in caso di fratture costali.

Monouso, venduto in cellophane, in confezione non sterile

Dispositivo CE di Classe I

REDISTERN® è disponibile in 4 taglie.

Nextensible chest strap, having a front closure with adjustable handles that can be used as an aid in respiratory therapy for patients after sternotomy.

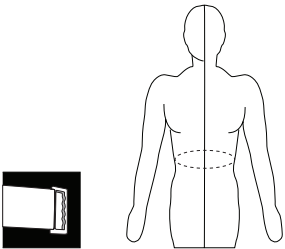

Wraps ready for post-operative use in cardiothoracic surgery (sternotomy), allows the patient to perform respiratory movements, and violent expirations (coughing, sneezing, etc..) avoiding the expansion of the chest that could herald the possibility of reopening the wounds and postoperative suture, and decreasing pain.

It can also be used in cases of rib fractures.

Single-use, sold in non-sterile cellophane pack.

CE Class I medical device.

REDISTERN® is available in 4 sizes.

SIZE	Ø	CODE / CODICE PRODOTTO
